

# Access Backend Exercise B

## **Mission**

Build an Voting Server to determine an issue about Wuhan coronavirus

## **Take Note**

- Anything about programming language and libraries, please feel free to use you like.
- Programming language Elixir is a “bonus” item. Please feel free to ignore it.
- If anything in the exercise is unspecified and you need to make assumptions, feel free to do it.

## **Question**

Assume that we have a voting server that is designed for determining whether Wuhan coronavirus is created by China. The user can vote agree or disagree at any time. Please implement two APIs one is for voting and one is for retrieving the current votes count.
